

LOOKING FOR BIODIVERSITY DATA? HERE THEY ARE!

*Call for research proposals for the french
research infrastructure Recolnat - recolnat.org*

Les herbonautes
L'herbier numérique collaboratif citoyen

DEADLINE SEPTEMBER 30, 2016

The French research infrastructure Recolnat has already digitalized more than **7 M of herbarium specimens** from french Museums. In all these images, maybe there are some which will be useful for your science project.

However images without data are quite hard to use. Therefore, we developed a **crowdsourcing program**, named Les Herbonautes - lesherbonautes.mnhn.fr - allowing citizens to help with the transcription of informations.

We are opening a **call for research projects to provide our crowdsourcing community with**, so if you are looking for some specific data we can launch together an herbonautes task for it.
